\$100	Onsite		03/09

Learning Objectives

Upon completion of this program, participants should be able to:

- Summarize and implement the latest advances in technology, testing and imaging for the diagnosis and management of cardiovascular disease.
- Discuss and apply new interventional tools and therapeutic options for the treatment of valvular heart disease, coronary artery disease, heart failure and peripheral artery disease.
- Recognize and articulate the importance of peripheral artery disease diagnosis and its relationship to cardiovascular disease.
- Design pharmacotherapy goals for patients with a variety of secondary prevention cardiovascular risk factors.
- Evaluate endovascular techniques for below-the-knee interventions.
